New 10mL Ovation® Macro Volume Pipette

**Electronic accuracy for large volume liquid handling
with the convenience of disposable tips**

Mt. Kisco, NY – September 7, 2007 – VistaLab Technologies, Inc. has added a new 10mL macro volume model to its Ovation BioNatural™ Pipette product line, extending significant speed and comfort benefits to users with large volume applications. Electronic operations combined with the convenience of disposable tips that easily reach into tall tubes, flasks and bottles will greatly improve productivity and accuracy in procedures often reliant on manual use of serological pipets. A relaxed grip design, low weight, and electronic operations make repetitive pipetting effortless, even over prolonged periods. A broad menu of liquid handling functions provides rapid, precise and accurate dispensing, up to 50 times from a single aspiration, as well as mixing and serial diluting within a range of 200µL to 10mL. The pipette's unique nozzle can also accommodate the use with both glass and plastic serological pipets when extra length is needed to reach the bottom of extremely tall vessels. An integrated calibration function is provided for making adjustments to ensure optimum precision when using liquids of different viscosities and densities. Tips are available in non-sterile, sterile and filtered sterile choices, with a variety of packaging configurations including new recyclable VistaClear™ boxes. Detailed information is available on the Company's web site – www.vistalab.com
