New Tips and Recyclable Tip Packaging

Options expand for Macro Volume MLA and Ovation Pipettes

Mt. Kisco, NY – June 18, 2007 – VistaLab Technologies, Inc. is introducing new 5mL graduated tips for large volume MLA and Ovation pipettes. The tips are available in non-sterile, sterile and filtered sterile choices, with a variety of packaging configurations including new recyclable VistaClear™ boxes. VistaClear packaging is made from PETE, an inert plastic used for recyclable drink bottles, and collapses flat when empty for space-saving discard. With landfill capacities shrinking nationwide, the use of PETE and other diverse recyclable materials for packaging products such as pipette tips will help mitigate the costs associated with waste disposal.

MLA Pipettes are one of the most respected brands in the field of laboratory science. 1, 2, 3, 4 and 5mL models plus variable volume models are available. The 5mL Ovation pipette offers an innovative design using a relaxed grip and comfortable postures with full electronic operation, providing rapid, accurate and precise repeat dispensing from 100µL to 5mL. Pipettes, tips, and other VistaLab liquid handling products are available worldwide from laboratory supply dealers. Detailed information is available on the Company's web site – www.vistalab.com
